HOB'S ADVENTURE
SLOVENIA October 8, 2019

About us:

- public kindergarten
 - 4 municipalities
 - 78 groups in the school year
- 2019/2020

We learn to take care...

...how the herbs/ plants in our garden live.

The aim of the activity's was, to realize, that we are all responsible to preserve biodiversity.

Through exploration and observation, children become aware of the richness of nature, that surrounds us.

- rosemary

Children are very good observers. With our help, they realized that we can't see everything on first sight.

Children observe the first leaves, how the plant grows, the flowers bloom and prepare to rest in winter. We wanted to show the plant's in a different way, by using digital micro camera.

- Despite its seemingly healthy appearance, whether it's a plant or an animal, sometimes that's not the case.

Some activities:
care, observation,
measurement, counting
sorting, comparing,
colors, learning about
parts of the plant...

ENJOYING NATURE.....

With active learning, children developed skills: responsibility, patience, care for life around us, and of course joy and pride in success, seeing our positive impact on the environment.

The more we know about the world around us, the easier it is to understand nature, the closer we get to it and love it. (Zauner)

It's a learning process that never ends.

Thank you for your attention.
