

# MEET THE TREE

**DIVIDE INTO GROUPS. EACH GROUP SHOULD FIND THEIR OWN TREE.**

Hold hands and make a circle. Did you smell anything? Does the smell sound familiar to you?

---

Be very quiet, close your eyes and listen. What do you hear?

---

Measure the trunk with the palm of your hand. How much did you measure? Did you all measure the same?

---

How many branches does the tree have?

---

**FIND THE LOWEST TREE NEAR YOU. FIND THE TALLEST TREE NEAR YOU.**

What do they have in common?

---

Does the bark have the same texture and color at the bottom?

---

What happens if you throw the fruit of a tree high into the air?

---

What happens if you crush a fallen leaf or needles in your hands?

---

Why is the shade of deciduous trees denser in summer than in winter?

---

Why do you think there are fewer plants under a coniferous tree?

---
